Product Overview

Package Contents

- DSL-2740R Wireless N ADSL2+ Modem Router
- 2 non-detachable Antennas (MIMO 2x2)
- Power Adapter
- CD-ROM with Installation Wizard, User Manual, and Special Offers
- One twisted-pair telephone cable used for ADSL connection
- One straight-through Ethernet cable
- One Quick Installation Guide

Note: Using a power supply with a different voltage rating (12 V/ 1 A) than the one included with the DSL-2740R will cause damage and void the warranty for this product.

System Requirements

- ADSL Internet service
- Computer with:
 - 200MHz Processor
 - 64 MB Memory
 - CD-ROM Drive
 - Ethernet Adapter with TCP/IP installed
 - Windows 7/Vista/XP/2000
 - MAC OS
 - Internet Explorer 6 or higher, FireFox 1.5
 - D-Link Click's Connect Utility

Introduction

High-Speed ADSL2/2+ Internet Connection

Latest ADSL2/2+ standards provide Internet transmission speeds of up to 24 Mbps downstream and 1 Mbps upstream.*

High-Performance Wireless

Embedded 802.11n technology for high-speed wireless connection, complete compatibility with 802.11b/g wireless devices.

Total Security

Firewall protection from Internet attacks, user access control, WPA/WPA2 wireless security.

Ultimate Internet Connection

The DSL-2740R ADSL2+ Router is a versatile, high-performance remote router for home and the small office. With integrated ADSL2/2+ supporting download speeds of up to 24 Mbps, firewall protection, Quality of Service (QoS), 802.11n wireless LAN, and 4 Ethernet switch ports, this router provides all the functions that a home or small office needs to establish a secure and high-speed remote link to the outside world.

Ultimate Wireless Connection With Maximum Security

This router provides maximum wireless performance. Just connect this router to a computer interface and stay connected from virtually anywhere at home and in the office. The router can be used with 802.11b/g/n wireless networks to enable significantly improved reception. It supports WPA/WPA2 and WEP for flexible user access security and data encryption methods.

Firewall Protection & QoS

Security features prevents unauthorized access to your home or office network, be it from wireless devices or from the Internet. The router provides firewall security using Stateful Packet Inspection (SPI) and hacker attack logging for Denial of Service (DoS) attack protection. SPI inspects the contents of all incoming packet headers before deciding what packets are allowed to pass through. Router access control is featured with packet filtering based on port and source/destination MAC/IP addresses. For Quality of Service (QoS), the router supports multiple priority queues in order to enable a group of home or office users to experience the benefit of having a smooth network connection of inbound and outbound data without being concerned about traffic congestion. This QoS support allows users to enjoy a fast ADSL transmission for applications such as VoIP and streaming multimedia over the Internet.

*Maximum wireless signal rate derived from IEEE standard 802.11n specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials, and construction, and network overhead, can lower the actual data throughput rate. Environmental factors will adversely affect wireless signal range.

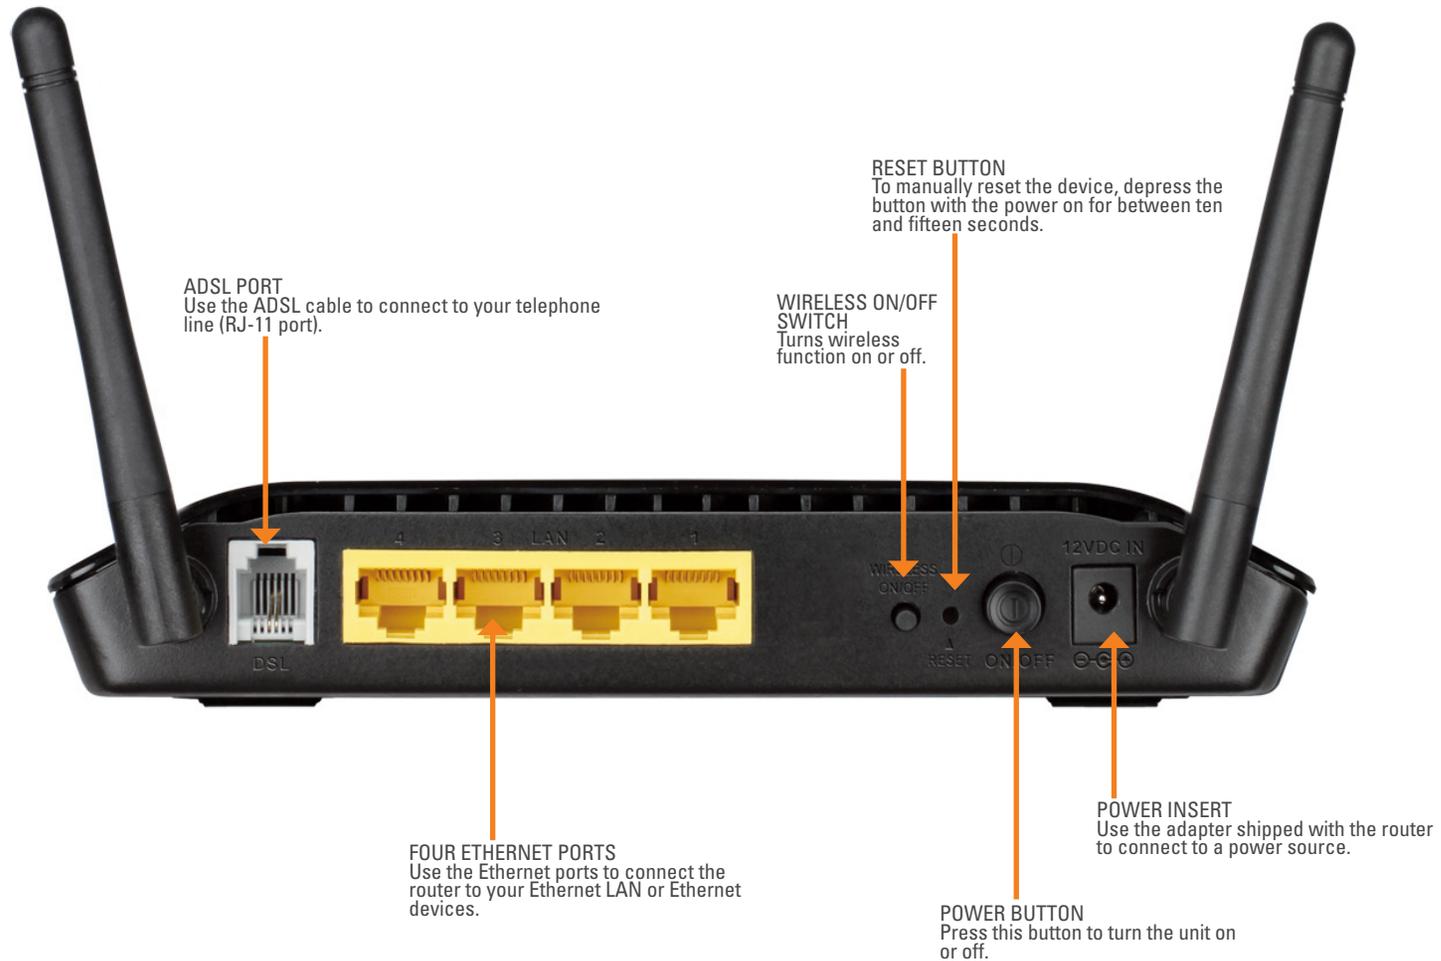

Features

- **Faster Wireless Networking** - The DSL-2740R provides a wireless connection of up to 300 Mbps* with other 802.11n wireless clients. This capability allows users to fully participate in real-time activities online, such as video streaming, online gaming, and real-time audio.
- **Compatible with 802.11b and 802.11g Devices** - The DSL-2740R is still fully compatible with the IEEE 802.11b and g standards, so it can connect with existing 802.11b and g PCI, USB, and Cardbus adapters.
- **DHCP Support** - Dynamic Host Configuration Protocol automatically and dynamically assigns all LAN IP settings to each host on your network. This eliminates the need to reconfigure every host whenever changes in network topology occur.
- **Network Address Translation (NAT)** - For small office environments, the DSL-2740R allows multiple users on the LAN to access the Internet concurrently through a single Internet account. This provides Internet access to everyone in the office for the price of a single user. NAT improves network security in effect by hiding the private network behind one global and visible IP address. NAT address mapping can also be used to link two IP domains via a LAN-to-LAN connection.
- **Precise ATM Traffic Shaping** - Traffic shaping is a method of controlling the flow rate of ATM data cells. This function helps to establish the Quality of Service for ATM data transfer.
- **High Performance** - Very high rates of data transfer are possible with the Router including a downstream bit rate of up to 24 Mbps using the G.dmt standard. (For ADSL2+)
- **Full Network Management** - The DSL-2740R incorporates SNMP (Simple Network Management Protocol) support for web-based management and text-based network management via Telnet connection.
- **Easy Installation** - The DSL-2740R uses a web-based graphical user interface program for convenient management access and easy setup. Any common web browser software can be used to manage the router.

*Maximum wireless signal rate derived from IEEE standard 802.11n specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, can lower the actual data throughput rate. Environmental factors will adversely affect wireless signal range.

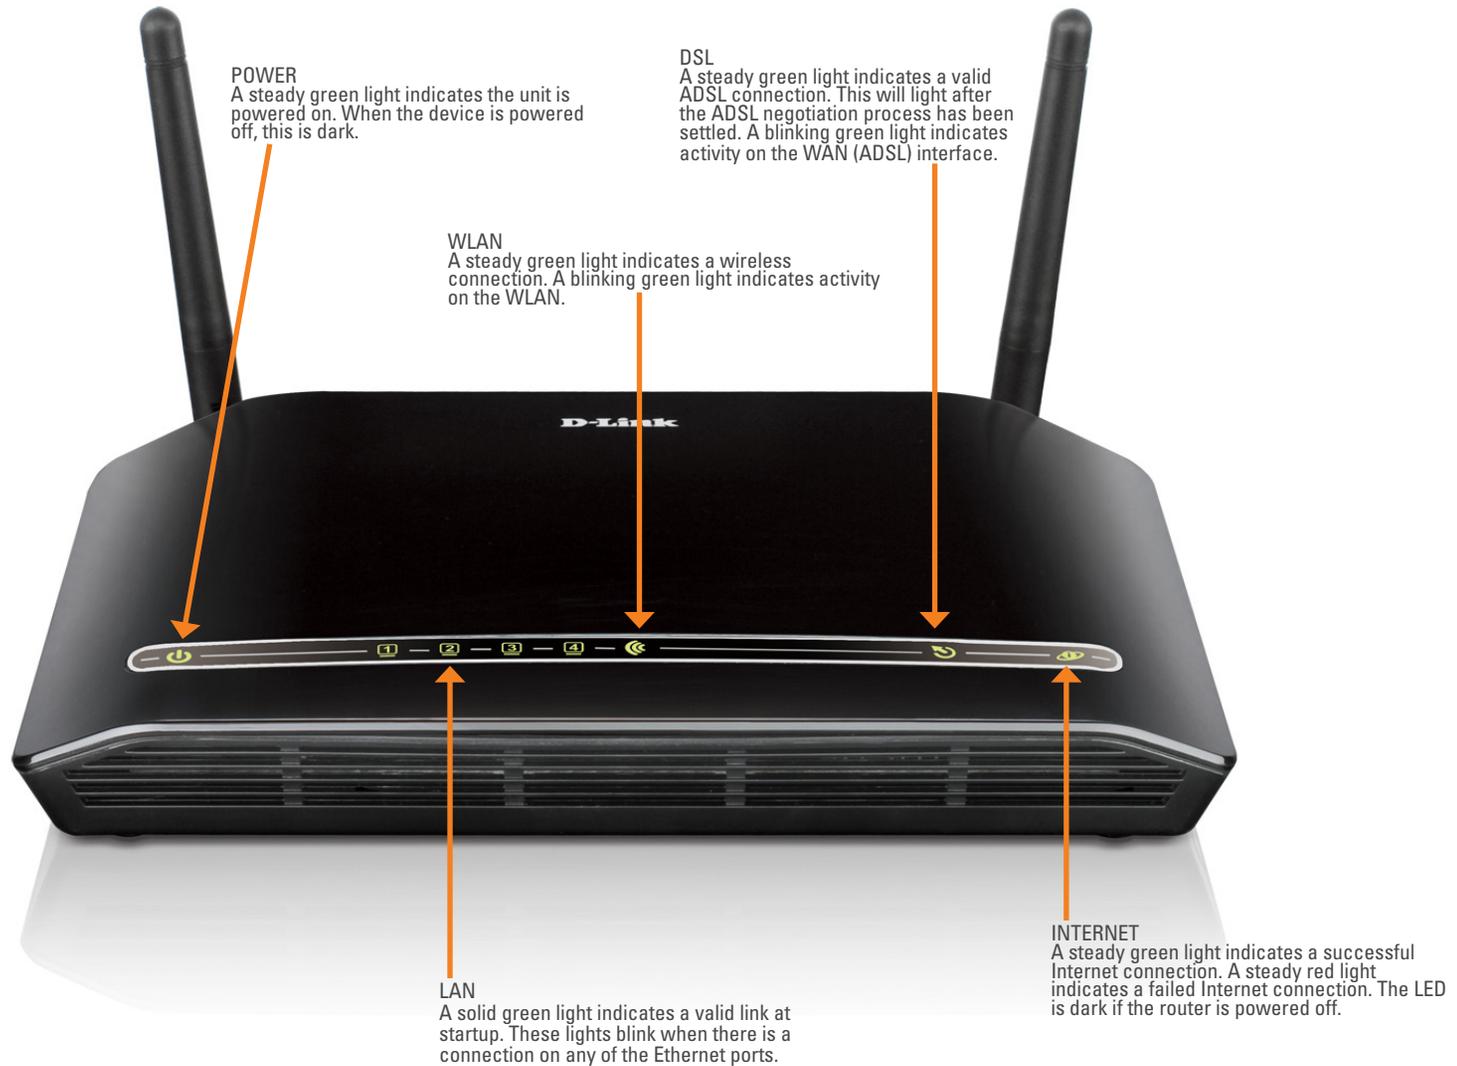

Hardware Overview

Connections

Hardware Overview

LEDs

Installation

This section will walk you through the installation process. Placement of the router is very important. Do not place the router in an enclosed area such as a closet, cabinet, or in the attic or garage.

Before you Begin

Please read and make sure you understand all the prerequisites for proper installation of your new router. Have all the necessary information and equipment on hand before beginning the installation.

Installation Notes

In order to establish a connection to the Internet it will be necessary to provide information to the router that will be stored in its memory. For some users, only their account information (Username and Password) is required. For others, various parameters that control and define the Internet connection will be required. You can print out the two pages below and use the tables to list this information. This way you have a hard copy of all the information needed to setup the router. If it is necessary to reconfigure the device, all the necessary information can be easily accessed. Be sure to keep this information safe and private.

Low Pass Filters

Since ADSL and telephone services share the same copper wiring to carry their respective signals, a filtering mechanism may be necessary to avoid mutual interference. A low pass filter device can be installed for each telephone that shares the line with the ADSL line. These filters are easy to install passive devices that connect to the ADSL device and/or telephone using standard telephone cable. Ask your service provider for more information about the use of low pass filters with your installation.

Operating Systems

The DSL-2740R uses an HTML-based web interface for setup and management. The web configuration manager may be accessed using any operating system capable of running web browser software, including Windows 98 SE, Windows ME, Windows 2000, and Windows XP.

Web Browser

Any mainstream web browser can be used to configure the router using the web configuration management software. The program is designed to work best with more recently released browsers such as Opera, Microsoft Internet Explorer® version 6.0, Netscape Navigator® version 6.2.3, or later versions. The web browser must have JavaScript enabled. JavaScript is enabled by default on many browsers. Make sure JavaScript has not been disabled by other software (such as virus protection or web user security packages) that may be running on your computer.

Ethernet Port (NIC Adapter)

Any computer that uses the router must be able to connect to it through the Ethernet port on the router. This connection is an Ethernet connection and therefore requires that your computer be equipped with an Ethernet port as well. Most notebook computers are now sold with an Ethernet port already installed. Likewise, most fully assembled desktop computers come with an Ethernet NIC adapter as standard equipment. If your computer does not have an Ethernet port, you must install an Ethernet NIC adapter before you can use the router. If you must install an adapter, follow the installation instructions that come with the Ethernet NIC adapter.

802.11 Wireless LAN Configuration

All the 802.11 wireless LAN settings may be configured on a single page using the web-based manager. For basic wireless communication you need to decide what channel to use and what SSID to assign. These two settings must be the same for any wireless workstations or other wireless access point that communicate with the DSL-2740R through the wireless interface.

Security for wireless communication can be accomplished in a number of ways. The DSL-2740R supports WPA (Wi-Fi Protected Access), WPA2, and mixed WPA/WPA2. Wireless access can also be controlled by selecting MAC addresses that are allowed to associate with the device. Please read the section on Wireless Configuration.

Additional Software

It may be necessary to install software on your computer that enables the computer to access the Internet. Additional software must be installed if you are using the device as a simple bridge. For a bridged connection, the information needed to make and maintain the Internet connection is stored on another computer or gateway device, not in the router itself.

If your ADSL service is being delivered through a PPPoE or PPPoA connection, the information needed to establish and maintain the Internet connection can be stored in the router. In this case, it is not necessary to install software on your computer. It may however be necessary to change some settings in the device, including account information used to identify and verify the connection.

All connections to the Internet require a unique global IP address. For bridged connections, the global IP settings must reside in a TCP/IP enabled device on the LAN side of the bridge, such as a PC, a server, a gateway device such as a router, or similar firewall hardware. The IP address can be assigned in a number of ways. Your network service provider will give you instructions about any additional connection software or NIC configuration that may be required.

Information you will need from your ADSL service provider

Username

This is the username used to log on to your ADSL service provider's network. It is commonly in the form user@isp.co.uk. Your ADSL service provider uses this to identify your account.

Password

This is the password used, in conjunction with the Username above, to log on to your ADSL service provider's network. This is used to verify the identity of your account.

WAN Setting / Connection Type

These settings describe the method your ADSL service provider uses to transport data between the Internet and your computer. Most users will use the default settings. You may need to specify one of the following WAN Setting and Connection Type configurations (Connection Type settings listed in parenthesis):

- PPPoE/PPoA (PPPoE LLC, PPPoA LLC or PPPoA VC-Mux)
- Bridge Mode (1483 Bridged IP LLC or 1483 Bridged IP VC Mux)
- IPoA/MER (Static IP Address) (Bridged IP LLC, 1483 Bridged IP VC Mux, 1483 Routed IP LLC, 1483 Routed IP VC-Mux or IPoA)
- MER (Dynamic IP Address) (1483 Bridged IP LLC or 1483 Bridged IP VC-Mux)

Modulation Type

ADSL uses various standardized modulation techniques to transmit data over the allotted signal frequencies. Some users may need to change the type of modulation used for their service. The default DSL modulation (ADSL2+ Multi-Mode) used for the router automatically detects all types of ADSL, ADSL2, and ADSL2+ modulation. However, if you are instructed to specify the modulation type used for the router, you may choose among the numerous options available on the Modulation Type drop-down menu on the ADSL Configuration window (Advanced > ADSL).

Security Protocol

This is the method your ADSL service provider will use to verify your username and password when you log on to their network. Your router supports the PAP and CHAP protocols.

VPI

Most users will not be required to change this setting. The Virtual Path Identifier (VPI) is used in conjunction with the Virtual Channel Identifier (VCI) to identify the data path between your ADSL service provider's network and your computer. If you are setting up the router for multiple virtual connections, you will need to configure the VPI and VCI as instructed by your ADSL service provider for the additional connections. This setting can be changed in the WAN Settings window of the web management interface.

VCI

Most users will not be required to change this setting. The Virtual Channel Identifier (VCI) used in conjunction with the VPI to identify the data path between your ADSL service provider's network and your computer. If you are setting up the router for multiple virtual connections, you will need to configure the VPI and VCI as instructed by your ADSL service provider for the additional connections. This setting can be changed in the WAN Settings window of the web management interface.

Information you will need about the DSL-2740R

Username

This is the username needed to access the router's management interface. When you attempt to connect to the device through a web browser you will be prompted to enter this username. The default username for the router is "admin." The user cannot change this.

Password

This is the password you will be prompted to enter when you access the router's management interface. The default Password is "admin." The user may change this.

LAN IP addresses for the DSL-2740R

This is the IP address you will enter into the Address field of your web browser to access the router's configuration graphical user interface (GUI) using a web browser. The default IP address is 192.168.1.1. This may be changed to suit any IP address scheme the user desires. This address will be the base IP address used for DHCP service on the LAN when DHCP is enabled.

LAN Subnet Mask for the DSL-2740R

This is the subnet mask used by the DSL-2740R, and will be used throughout your LAN. The default subnet mask is 255.255.255.0. This can be changed later.

Information you will need about your LAN or computer

Ethernet NIC

If your computer has an Ethernet NIC, you can connect the DSL-2740R to this Ethernet port using an Ethernet cable. You can also use the Ethernet ports on the DSL-2740R to connect to other computers or Ethernet devices.

DHCP Client status

Your DSL-2740R ADSL Router is configured, by default, to be a DHCP server. This means that it can assign an IP address, subnet mask, and a default gateway address to computers on your LAN. The default range of IP addresses the DSL-2740R will assign are from 192.168.1.2 to 192.168.1.254. Your computer (or computers) needs to be configured to Obtain an IP address automatically (that is, they need to be configured as DHCP clients).

It is recommended that you collect and record this information here, or in some other secure place, in case you have to re-configure your ADSL connection in the future.

Once you have the above information, you are ready to setup and configure your DSL-2740R Wireless ADSL Router.

Wireless Installation Notes

DSL-2740R lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind, however, that the number, thickness, and location of walls, ceilings, or other objects that the wireless signals must pass through, may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business. The key to maximizing wireless range is to follow these basic guidelines:

- 1.** Keep the number of walls and ceilings between the D-Link router and other network devices to a minimum - each wall or ceiling can reduce your adapter's range from 3-90 feet (1-30 meters.) Position your devices so that the number of walls or ceilings is minimized.
- 2.** Be aware of the direct line between network devices. A wall that is 1.5 feet thick (0.5 meters), at a 45-degree angle appears to be almost 3 feet (1 meter) thick. At a 2-degree angle it looks over 42 feet (14 meters) thick! Position devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception.
- 3.** Building materials make a difference. A solid metal door or aluminum studs may have a negative effect on range. Try to position access points, wireless routers, and computers so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.
- 4.** Keep your product away (at least 3-6 feet or 1-2 meters) from electrical devices or appliances that generate RF noise.
- 5.** If you are using 2.4GHz cordless phones or X-10 (wireless products such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4GHz phone base is as far away from your wireless devices as possible. The base transmits a signal even if the phone is not in use.

Device Installation

The DSL-2740R Wireless ADSL Router maintains three separate interfaces: an Ethernet LAN, a wireless LAN and an ADSL Internet (WAN) connection. Carefully consider the router's location's suitability for connectivity for your Ethernet and wireless devices. You must have a functioning broadband connection via a bridge device such as a Cable or ADSL modem in order to use the router's WAN function.

Place the router in a location where it can be connected to various devices as well as to a power source. The router should not be located where it will be exposed to moisture, direct sunlight or excessive heat. Make sure the cables and power cord are placed safely out of the way so they do not create a tripping hazard. As with any electrical appliance, observe common sense safety procedures.

The router can be placed on a shelf, desktop, or other stable platform. If possible, you should be able to see the LED indicators on the front if you need to view them for troubleshooting.

Power on Router

The router must be used with the power adapter included with the device.

1. Insert the AC Power Adapter cord into the power receptacle located on the rear panel of the router and plug the adapter into a suitable nearby power source.
2. Push down the Power button, and you should see the Power LED indicator light up and remain lit.
3. If the Ethernet port is connected to a working device, check the Ethernet Link/Act LED indicators to make sure the connection is valid. The router will attempt to establish the ADSL connection. If the ADSL line is connected and the router is properly configured this should light up after several seconds. If this is the first time installing the device, some settings may need to be changed before the router can establish a connection.

Factory Reset Button

The router may be reset to the original factory default settings by using a ballpoint or paperclip to gently push down the reset button in the following sequence:

1. Press and hold the reset button while the device is powered off.
2. Turn on the power.
3. Wait for 10~15 seconds and then release the reset button.

Remember that this will wipe out any settings stored in flash memory including user account information and LAN IP settings. The device settings will be restored to the factory default IP address **192.168.1.1** and the subnet mask 255.255.255.0. The default management Username is “admin” and the default Password is **admin**.

Network Connections

Connect ADSL Line

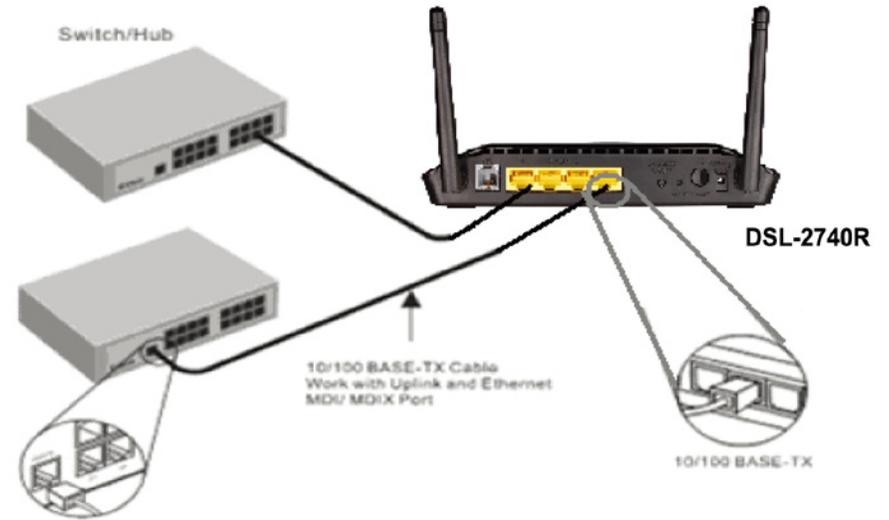

Use the ADSL cable included with the router to connect it to a telephone wall socket or receptacle. Plug one end of the cable into the ADSL port (RJ-11 receptacle) on the rear panel of the router and insert the other end into the RJ-11 wall socket. If you are using a low pass filter device, follow the instructions included with the device or given to you by your service provider. The ADSL connection represents the WAN interface, the connection to the Internet. It is the physical link to the service provider's network backbone and ultimately to the Internet.

Connect Router to Ethernet

The router may be connected to a single computer or Ethernet device through the 10BASE-TX Ethernet port on the rear panel. Any connection to an Ethernet concentrating device such as a switch or hub must operate at a speed of 10/100 Mbps only. When connecting the router to any Ethernet device that is capable of operating at speeds higher than 10 Mbps, be sure that the device has auto-negotiation (NWay) enabled for the connecting port. Use standard twisted-pair cable with RJ-45 connectors. The RJ-45 port on the router is a crossed port (MDI X). Follow standard Ethernet guidelines when deciding what type of cable to use to make this connection. When connecting the router directly to a PC or server, use a normal straight-through cable. You should use a crossed cable when connecting the router to a normal (MDI-X) port on a switch or hub. Use a normal straight-through cable when connecting it to an uplink (MDI-II) port on a hub or switch. The rules governing Ethernet cable lengths apply to the LAN to router connection. Be sure that the cable connecting the LAN to the router does not exceed 100 meters.

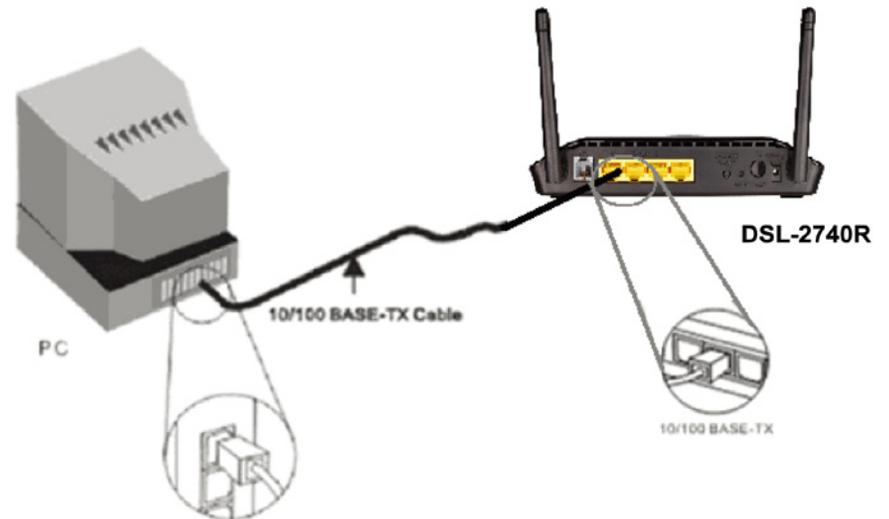

Hub or Switch to Router Connection

Connect the router to an uplink port (MDI-II) on an Ethernet hub or switch with a straight-through cable as shown in this diagram. If you wish to reserve the uplink port on the switch or hub for another device, connect to any of the other MDI-X ports (1x, 2x, etc.) with a crossed cable.

Computer to Router Connection

You can connect the router directly to a 10/100BASE-TX Ethernet adapter card (NIC) installed on a PC using the Ethernet cable provided as shown in this diagram.

Configuration

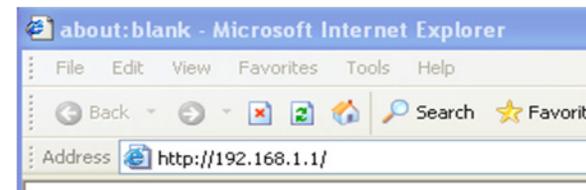

This section will show you how to configure your new D-Link wireless router using the web-based configuration utility.

Web-based Configuration Utility

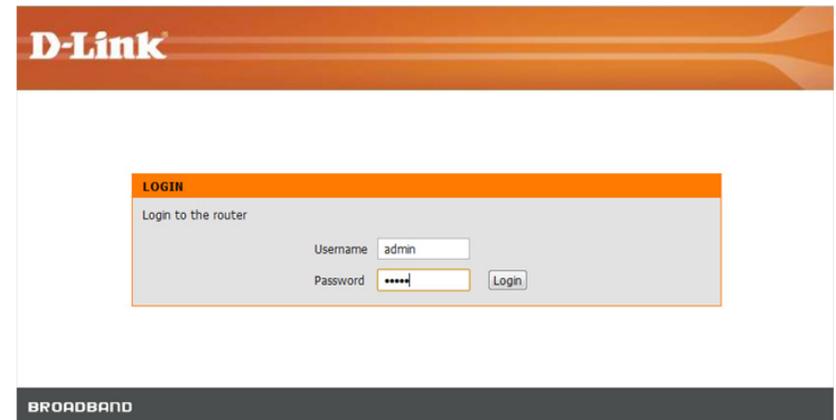

Connect to the router

To configure the WAN connection used by the router it is first necessary to communicate with the router through its management interface, which is HTML-based and can be accessed using a web browser. The easiest way to make sure your computer has the correct IP settings is to configure it to use the DHCP server in the router. The next section describes how to change the IP configuration for a computer running a Windows operating system to be a DHCP client.

To access the configuration utility, open a web browser such as Internet Explorer and enter the IP address of the router (192.168.1.1).

Type **admin** for the User Name and **admin** in the Password field.

Setup Wizard

This chapter is concerned with using your computer to configure the WAN connection. The following chapter describes the various windows used to configure and monitor the router including how to change IP settings and DHCP server setup.

ADSL SETUP

Click on **Setup Wizard** to launch the **Setup Wizard**.

WELCOME TO D-LINK SETUP WIZARD

There are four steps for configuring your router. Click on **Next** to continue.

STEP 1: CHANGE YOUR DSL-2740R PASSWORD

The default password is **admin**. In order to secure your network, please modify the password. Note: The **Confirm Password** entry must be the same as that for **New Password**. Of course, you can click on **Skip** to ignore the step.

STEP 2: SET TIME AND DATE

TIME SETTING:

Please enable **Automatically synchronize with Internet time servers** if you want to use the time server.

You can use the default time server web site or type any web server name you want in the **First NTP time server** and the **Second NTP time server** fields.

Please select the time zone of your country in the **Time Zone** option.

If you need to enable daylight saving time, just click on the **Enable Daylight Saving** checkbox. Daylight saving is a period from late Spring to early Fall.

Configure Daylight Saving Dates

Daylight Saving time starts in most parts of the United States on the second Sunday of March. Each time zone in the United States starts Daylight Saving time at 2 A.M. Thus, for the United States you should select March, Second, Sunday, at 2:00 A.M for the **Start**.

STEP 1: CHANGE YOUR PASSWORD

The factory default password of this router is 'admin'. To help secure your network, D-Link recommends that you should choose a new password. If you do not wish to choose a new password now, just Click **Skip** to continue. Click **Next** to proceed to next step.

Current password :

New password :

Confirm password :

STEP 2: SET TIME AND DATE

The Time Configuration option allows you to configure, update, and maintain the correct time on the internal system clock. From this section you can set the time zone that you are in and set the NTP (Network Time Protocol) Server. Daylight Saving can also be configured to automatically adjust the time when needed.

TIME SETTINGS

Automatically synchronize with Internet time servers

First NTP time server :

Second NTP time server :

TIME CONFIGURATION

Current Router Time : Friday, January 01, 2010 00:32:00 AM

Time Zone :

Enable Daylight Saving :

	Month	Week	Day	Time
Start	<input type="text" value="Jan"/>	<input type="text" value="1st"/>	<input type="text" value="Sun"/>	<input type="text" value="12 am"/>
End	<input type="text" value="Jan"/>	<input type="text" value="1st"/>	<input type="text" value="Sun"/>	<input type="text" value="12 am"/>

Daylight Saving time starts in the European Union on the last Sunday of March. Thus, in the European Union, you must select March, Last, Sunday. The time must depend on your country's time zone. For example, in Germany you must type 2 because Germany's time zone is 1 hour ahead of GMT or UTC (GMT+1). Thus, in Germany you must select March, Last, Sunday, at 1:00 A.M.

Daylight Saving time ends in most parts of the United States on the first Sunday of November. Each time zone in the United States must use Daylight Saving time at 2:00 A.M. Thus, in the United States you must set November, First, Sunday, at 2:00 A.M for the End.

Daylight Saving time ends in the European Union on the last Sunday of October. For instance, in Germany you must type 2 because Germany's time zone is 1 hour ahead of GMT (GMT+1). Thus, in Germany you must set March, Last, Sunday, at 1:00 A.M for the End.

SET THE DATE AND TIME MANUALLY

You can also use the **Copy Your Computer's Time Settings** to synchronize the Date and Time to your local PC. Or, you can also adjust **Year/Month/Day/Hour/Minute/Second** values manually.

Click on **Next** to save the configuration and continue.

The screenshot shows a configuration window titled "SET THE DATE AND TIME MANUALLY". Inside the window, under the heading "Date And Time:", there are six dropdown menus for setting the date and time. The values are: Year: 2007, Month: Jan, Day: 1, Hour: 12 am, Minute: 0, and Second: 0. Below these dropdowns is a button labeled "Copy Your Computer's Time Settings". At the bottom of the window, there are three buttons: "Back", "Next", and "Cancel".

STEP 3: SELECT INTERNET CONNECTION TYPE

Please select your **Country** and **ISP Provider** from the list.

If you cannot find the country and ISP in the list; you can select **Others**, and then input the **VPI** and **VCI** and **Connection Type**.

Please enter the VPI/VCI numbers if provided by the ISP.

Click on **Next** to save the configuration and continue.

STEP 3: SELECT INTERNET CONNECTION TYPE

Please select your Country and ISP (Internet Service Provider) from the list below. If your Country or ISP is not in the list, please select "Other".

Country : (Click to select) ▼

ISP Provider : (Click to select) ▼

VPI : (Enter a number)

VCI : (Enter a number)

Connection Type : PPPoA VC-Mux ▼

Please enter your **Username** and **Password** provided by your ISP provider.

Click on **Next** to go to the next **Setup Wizard** window.

STEP 3: SELECT INTERNET CONNECTION TYPE

Please enter your Username and Password as provided by your ISP (Internet Service Provider). Please enter the information exactly as shown taking note of upper and lower cases. Click **Next** to continue.

Username :

Password :

Confirm Password :

STEP 4: CONNECT TO INTERNET

Click on **APPLY** to save the configuration.

STEP 4: CONNECT TO INTERNET

Setup completed. Click Back to review or modify settings. Click Apply to submit current settings on router. If your Internet connection does not work, you can try the Setup Wizard again with alternative settings or use Manual Setup instead if you have your Internet connection details as provided by your ISP.

Internet Setup

To access the **INTERNET SETUP (WAN)** settings window, click on the **INTERNET SETUP** button in the **SETUP** directory and select **Manual Setup** to configure the MANUAL ADSL interface on this page:

INTERNET SETUP

If you want to type connection configuration for various types, please enable **Manual Setup**.

MANUAL ADSL CONNECTION SETUP

PPPoE/PPPoA

Choose this option if your ISP uses PPPoE/PPPoA.(For most DSL users)

Dynamic IP Address

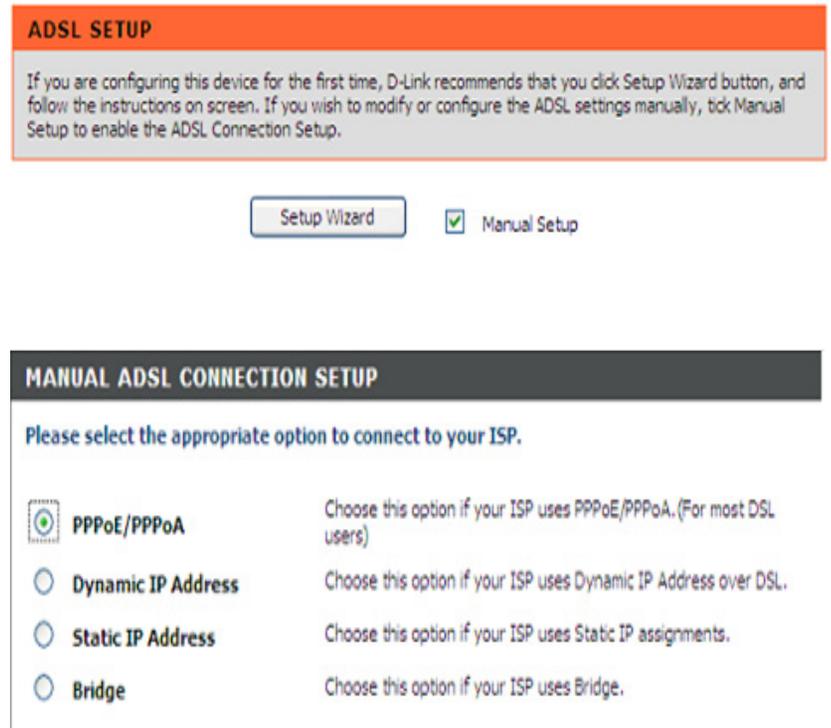

Choose this option if your ISP uses Dynamic IP Address over DSL.

Static IP Address

Choose this option if your ISP uses Static IP assignments.

Bridge

Choose this option if your ISP uses Bridge.

For PPPoE/PPPoA connection

Type the **Username** and **Password** (and PPPoE Service Name, if required by your ISP).

Type the service name from your ISP in **Servername**.

Choose **PPPoE LLC/Snap-Bridging**, **PPPoE VC-mux**, **PPPoA LLC/encapsulation** or **PPPoA VC-mux** in **Connection Type**.

Type the MTU value which you want (it should be less than 1492) in **MTU**.

Set the time for which if your data doesn't pass through the connection, it will be disconnected in **Idle Time Out**. The default time is 0 and it means it is always on.

DNS AND DEFAULT GATEWAY

Select **Obtain DNS server address automatically** to get DNS from your ISP.

Or

Select **Use the following DNS server addresses** to type the DNS IPs in the **Preferred DNS server** and **Alternate DNS server**.

The screenshot shows the 'PPPOE/PPPOA INTERNET CONNECTION TYPE' configuration window. It contains the following fields and options:

- Username :** [Empty text box]
- Password :** [Empty text box]
- Servername :** [Empty text box]
- Connection Type :** A dropdown menu with 'PPPoE LLC/Snap-Bridging' selected.
- MTU :** [1492 text box]
- Idle Time Out :** [0 text box] Minutes (0 = Always On)

The screenshot shows the 'DNS AND DEFAULT GATEWAY' configuration window. It contains the following options and fields:

- Obtain DNS server address automatically**
WAN Interface selected: [CurrentInterface dropdown]
- Use the following DNS server addresses**
Preferred DNS server: [168.95.1.1 text box]
Alternate DNS server: [168.95.192.1 text box]
- Default Gateway interface**
Selected Gateway Interface: [CurrentInterface dropdown]

Type the PVC values which are from your ISP in **VPI/VCI**.

Select **Enable NAT** when you want to have WAN and LAN.

Select **Enable Firewall** when you want to have the basic filter function, for example, ICMP ping to DSL-2740R.

Select **Enable IGMP Proxy** when you want to let IAD act as a IGMP proxy which can help the proxy server to send IGMP query packets to the IPTV clients.

Click on **Apply** to save the configuration.

VPI :	<input type="text" value="0"/>
VCI :	<input type="text" value="38"/>
Enable NAT :	<input checked="" type="checkbox"/>
Enable FIREWALL :	<input type="checkbox"/>
Enable IGMP Proxy :	<input type="checkbox"/>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Wireless

Use this section to configure the wireless settings for your D-Link router. Please note that changes made in this section will also need to be duplicated onto your wireless clients and PC.

To access the **WIRELESS** (WLAN) settings window, click on **Wireless Setup** in the SETUP directory.

Wireless Network Setting

Click on **Wireless Connection Setup Wizard** to set up the wireless connection in an easy way. It will use a Web-based Wizard to assist you in connecting to your new D-Link Systems Wireless Router.

Note: Before launching the wizard, please make sure you have followed all the steps outlined in the Quick Installation Guide included in the package.

Click on the **Add Wireless Device with WPS** button. This wizard is designed to assist you in connecting your wireless device to your router with WPS. It will guide you using step-by-step instructions on how to get your wireless device connected.

If you would like to configure the Internet settings of your new D-Link Router manually, then click on **Manual Wireless Connection Setup**.

WIRELESS SETUP

There are 2 ways to setup your wireless connection. You can use the Wireless Connection Setup wizard or you can manually configure the connection.

Please note that changes made on this section will also need to be duplicated to your wireless clients and PC.

WIRELESS CONNECTION SETUP WIZARD

The following Web-based wizard is designed to assist you for your wireless network setup and wireless device connection.

[Wireless Connection Setup Wizard](#)

Note: Before launching the wizard, please make sure you have followed all steps outlined in the Quick Installation Guide included in the package.

ADD WIRELESS DEVICE WITH WPS (WI-FI PROTECTED SETUP) WIZARD

According to the Wi-Fi 802.11n specification, Wi-Fi Protected Setup is not fully supported with WEP security mode. We will disable the Wi-Fi Protected Setup if you chose WEP security mode.

[Add wireless Device with WPS](#)

MANUAL WIRELESS CONNECTION OPTIONS

If you would like to configure the Internet settings of you new D-Link Router manually, then click on the button below.

[Manual Wireless Connection Setup](#)

Clicking on **Wireless Connection Setup Wizard** will open the D-Link Wireless Security Setup Wizard.

Enable Your Wireless Network

Your wireless network is enabled by default. You can simply uncheck the **Enable Your Wireless Network** checkbox to disable wireless.

Network Name (SSID) identifies members of the Service Set. Accept the default name or change it to something else. If the default SSID is changed, all other devices on the wireless network must also use the same SSID.

In order to protect your network from hackers and unauthorized users, Auto (WPA or WPA2) security will be used. We provide users a random pre-shared key automatically. You can also set it manually if you do not prefer the key we generate.

Type a string (8-63 characters, such as a~z, A~Z, or 0~9) for **Pre-Shared Key**.

Click **Prev** to go back to the previous page.

Click **Next** to go to the next page.

Click **Cancel** to return to the main menu of the Wireless Setup page.

The screenshot shows the 'WELCOME TO THE D-LINK WIRELESS SECURITY SETUP WIZARD' window. It contains the following elements:

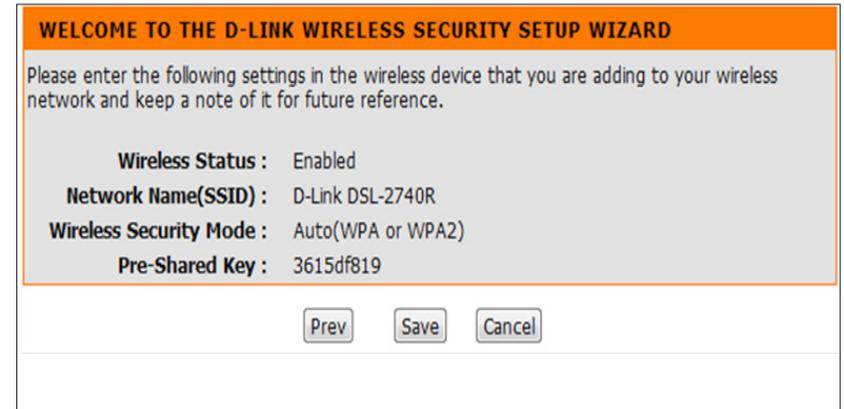

- Header:** WELCOME TO THE D-LINK WIRELESS SECURITY SETUP WIZARD
- Text:** Your wireless network is enabled by default. You can simply uncheck the below checkbox to disable wireless.
- Checkbox:** **Enable Your Wireless Network**
- Text:** Give your network a name, using up to 32 characters.
- Text Input:** **Wireless Network Name (SSID):** (1-32 characters)
- Text:** Set your wireless encryption mode. We will automatically assign a security key to prevent outsiders from accessing your wireless network, the router will automatically assign a security key to your wireless network.
- Text:** **Wireless Security Mode:** Auto (WPA or WPA2)
- Text Input:** **Pre-Shared Key:** (8-63 characters, such as a~z, A~Z, or 0~9.)
- Note:** We provide user a random pre-shared key by automatically. You can also set it manually if you do not prefer the key we generate.
- Buttons:** Prev, Next, Cancel

On this page, you can check the **Wireless Status, Network Name (SSID), Wireless Security Mode,** and **Pre-shared Key.**

Click **Prev** to go back to the previous page.

Click **Save** to save the configuration and return to the main menu of the Wireless Setup page.

Click **Cancel** to return to the main menu of the Wireless Setup page.

Add Wireless Device with WPS

Clicking on **Add Wireless Device with WPS** will open the D-Link Add Wireless Device with WPS (Wi-Fi Protected Setup) Wizard.

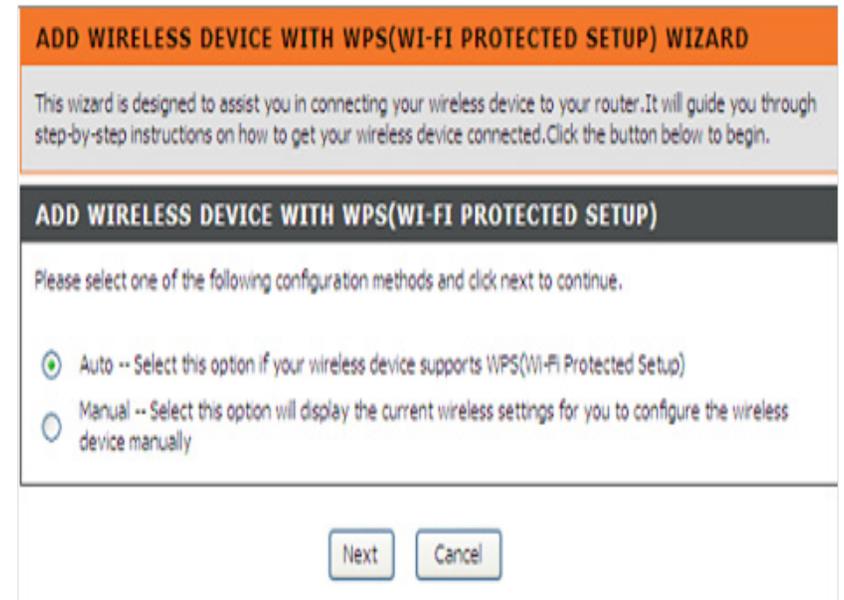

The wizard provides you the option to set up WPS using either the **Auto** or **Manual methods.**

Auto -- Select this option if your wireless device supports WPS (Wi-Fi Protected Setup).

Manual -- Select this option to display the current wireless settings for you to configure the wireless device manually.

Click **Next** to go to the next page.

Click **Cancel** to return to the main menu of the Wireless Setup page.

Add Wireless Device with WPS (Automatically)

This page allows you to select the PIN or PBC method for WPS connection.

PIN- Enter the PIN code from your wireless device and click **Connect** to start the handshaking.

PBC- Click **Connect** on your wireless device and press the **Connect** button on your wireless device within 120 seconds to start the handshaking.

Click **Prev** to go back to the previous page.

ADD WIRELESS DEVICE WITH WPS(WI-FI PROTECTED SETUP)

There are two ways to add wireless device to your wireless network:

- PIN (Personal Identification Number)
- PBC (Push Button Configuration)

PIN : Please enter the PIN from your wireless device and click the below "Connect" button

PBC Please press the push button on your wireless device and press the "Connect" button below within 120 seconds

Add Wireless Device with WPS (WI-FI PROTECTED SETUP) WIZARD

This page will count down the timer for you to start WPS on the wireless device you are adding.

ADD WIRELESS DEVICE WITH WPS(WI-FI PROTECTED SETUP) WIZARD

This wizard is designed to assist you in connecting your wireless device to your router. It will guide you through step-by-step instructions on how to get your wireless device connected. Click the button below to begin.

VIRTUAL PUSH BUTTON

Please press down the Push Button (physical or virtual) on the wireless device you are adding to your wireless network within 112 seconds ...

Adding wireless device: In progress.

Add Wireless Device with WPS (Manually)

This screen shows the information for the SSID and the Network key that allow you to modify the current setting. If you selected Auto in the previous step, you won't see this page. Please then refer to the next column.

Please type the network name in the **Network Name SSID** field.

Please type the network key in the **Network Key** field.

Click **Next** to proceed to the next page.

ADD WIRELESS DEVICE WITH WPS(WI-FI PROTECTED SETUP) WIZARD

The Auto(WPA or WPA2)key must be one of the following guidelines:

- Between 8 and 63 characters (A longer encryption key is more secure than a short one)
- Exactly 64 characters using 0-9 and A-F

Network Name (SSID) :

Network key :

Add Wireless Device with WPS (WI-FI PROTECTED SETUP) Wizard

It will show the wireless login information. You can check if it is correct, then click **Next**.

Manual WIRELESS Connection Setup SETTINGS

Clicking on **Manual Wireless Connection Setup** on the Wireless Setup page will take you to the **Manual Wireless Connection Setup** page.

Click on **Enable Wireless** to allow the router to operate in the wireless environment.

The **SSID** identifies members of the Service Set. Accept the default name or change it to something else. If the default SSID is changed, all other devices on the wireless network must also use the same SSID.

The **Wireless Channel** can let you select the channel of your access point. Channel availability is different for different countries due to their regulations.

Select **802.11 Mode** to operate in b/g/n mode.

Or select specified mode to use 802.11b only, 802.11g only, or 802.11n only.

Choosing **Mixed 802.11g and 802.11b** enables the DSL-2740R to detect clients and use 802.11g or 802.11b to synchronize.

Choosing **Mixed 802.11n, 802.11g and 802.11b** enables the DSL-2740R to detect clients and use 802.11n, 802.11g or 802.11b to synchronize.

ADD WIRELESS DEVICE WITH WPS(WI-FI PROTECTED SETUP) WIZARD

Please enter the following settings in the wireless device that you are adding to your wireless network and keep a note of it for future reference.

Network Name(SSID) : DSL2740R
Wireless Security Mode : Auto(WPA or WPA2)
Pre-Shared Key : 12345678

WIRELESS

Use this section to configure the wireless settings for your D-Link router. Please note that changes made on this section will also need to be duplicated to your wireless clients and PC.

WIRELESS NETWORK SETTINGS

Enable Wireless :

Wireless Network Name (SSID) : D-Link DSL-2740R

Wireless Channel : 06

802.11 Mode : Mixed 802.11n, 802.11g and 802.11b

Channel Width : Auto 20/40 MHz

Transmission Rate : Best (automatic)

Visibility Status : Visible Invisible

Channel Width

The maximum rate for 20 MHz/GI=0 is 130 Mbps.

The maximum rate for 40 MHz/GI=1 is 300Mbps.

Transmission Rate

It is suggested that you keep the Best (automatic) selection.

This is related to Receive Sensitivity as follows, for example:

	MANRATE	HT20/GI=0	HT40/GI=0	HT40/GI=1
MCS 0	0x80	6.5 Mbps	13.5 Mbps	X
MCS 1	0x81	13 Mbps	27 Mbps	X
MCS 2	0x82	19.5 Mbps	40.5 Mbps	X
MCS 3	0x83	26 Mbps	54 Mbps	X
MCS 4	0x84	39 Mbps	81 Mbps	X
MCS 5	0x85	52 Mbps	108 Mbps	X
MCS 6	0x86	58.5 Mbps	121.5 Mbps	X
MCS 7	0x87	65 Mbps	135 Mbps	150 Mbps
MCS 8	0x88	13 Mbps	27 Mbps	X
MCS 9	0x89	26 Mbps	54 Mbps	X
MCS 10	0x8a	39 Mbps	81 Mbps	X
MCS 11	0x8b	52 Mbps	108 Mbps	X
MCS 12	0x8c	78 Mbps	162 Mbps	X
MCS 13	0x8d	104 Mbps	216 Mbps	X
MCS 14	0x8e	117 Mbps	243 Mbps	X
MCS 15	0x8f	130 Mbps	270 Mbps	300 Mbps

Choose Visible or Invisible to decide if you want to broadcast its SSID.

WIRELESS SECURITY Mode

To protect your privacy you can configure wireless security features. This device supports three wireless security modes including WEP, WPA, and WPA-Personal. WEP is the original wireless encryption standard. WPA provides a higher level of security. WPA-Personal does not require an authentication server.

WIRELESS SECURITY MODE

To protect your privacy you can configure wireless security features. This device supports three wireless security modes including: WEP, WPA-Personal, and None. WEP is the original wireless encryption standard. WPA provides a higher level of security. WPA-Personal does not require an authentication server.

Security Mode :

WIRELESS SECURITY MODE - WEP

WEP (Wireless Encryption Protocol) encryption can be enabled for security and privacy. WEP encrypts the data portion of each frame transmitted from the wireless adapter using one of the predefined keys. The router offers 64 or 128 bit encryption with four keys available.

Select **WEP Key Length** from the drop-down menu. (**128 bit** is stronger than **64 bit**.)

Specify the encryption key from the **Current Network Key** drop-down menu.

Enter up to four keys into the **WEP Key** fields.

Select the **Authentication** type from the drop-down menu. (**Shared** is better than **Open**.)

Click on **Apply Settings** to apply settings.

WEP

If you choose the WEP security option this device will ONLY operate in Legacy Wireless mode (802.11B/G). This means you will NOT get 11N performance due to the fact that WEP is not supported by the Draft 11N specification.

WEP is the wireless encryption standard. To use it you must enter the same key(s) into the router and the wireless stations. For 64 bit keys you must enter 10 hex digits into each key box. For 128 bit keys you must enter 26 hex digits into each key box. A hex digit is either a number from 0 to 9 or a letter from A to F. For the most secure use of WEP set the authentication type to "Shared Key" when WEP is enabled.

You may also enter any text string into a WEP key box, in which case it will be converted into a hexadecimal key using the ASCII values of the characters. A maximum of 5 text characters can be entered for 64 bit keys, and a maximum of 13 characters for 128 bit keys.

WEP Key Length: 128 bit (26 hex digits) (length applies to all keys)

WEP Key 1:

WEP Key 2:

WEP Key 3:

WEP Key 4:

Default WEP Key: WEP Key 1

Authentication: Open

Please take note of your SSID and security Key as you will need to duplicate the same settings to your wireless devices and PC.

Apply Settings Cancel

WIRELESS SECURITY MODE – WPA-Personal

Use **WPA** or **WPA2** mode to achieve a balance of strong security and best compatibility. This mode uses WPA for legacy clients while maintaining a higher level of security with stations that are WPA2 capable. Also the strongest cipher that the client supports will be used. For best security, use **WPA2 Only** mode. This mode uses AES (CCMP) cipher and legacy stations are not allowed access with WPA security. For maximum compatibility, use **WPA Only**. This mode uses TKIP cipher. Some gaming and legacy devices work only in this mode.

According to the WiFi Alliance 11N specification, Wi-Fi Protected Setup is not fully supported under WPA Only mode. We will disable your Wi-Fi Protected Setup if you use WPA Only mode.

Select **Auto(WPA or WPA2)** or **WPA2 only** or **WPA only** on the **WPA Mode**.

Type the value in seconds on the **Group Key Update Interval**. The default value is 1800.

Type the string on the **Pre-Shared Key**.

Click **Apply Settings** to save the configuration.

WPA

Use **WPA** or **WPA2** mode to achieve a balance of strong security and best compatibility. This mode uses WPA for legacy clients while maintaining higher security with stations that are WPA2 capable. Also the strongest cipher that the client supports will be used. For best security, use **WPA2 Only** mode. This mode uses AES(CCMP) cipher and legacy stations are not allowed access with WPA security. For maximum compatibility, use **WPA Only**. This mode uses TKIP cipher. Some gaming and legacy devices work only in this mode.

To achieve better wireless performance use WPA2PSK Only security mode (or in other words AES cipher).

WPA Mode : (TKIP or AES)

Group Key Update Interval :
(seconds)

PRE-SHARED KEY

Pre-Shared Key :

Please take note of your SSID and security Key as you will need to duplicate the same settings to your wireless devices and PC.

Local Network

You can configure the LAN IP address to suit your preference. Many users will find it convenient to use the default settings together with DHCP service to manage the IP settings for their private network. The IP address of the router is the base address used for DHCP. In order to use the router for DHCP on your LAN, the IP address pool used for DHCP must be compatible with the IP address of the router. The IP addresses available in the DHCP IP address pool will change automatically if you change the IP address of the router.

To access the **Local Network** settings window, click on **Local Network** in the SETUP directory.

ROUTER SETTINGS

To change the **Router IP Address** or **Subnet Mask**, type in the desired values.

DHCP SERVER SETTINGS (OPTIONAL)

The **Enable DHCP Server** is selected by default for the router's Ethernet LAN interface.

Set the **DHCP IP Address Range** and the default is from 192.168.1.2 to 192.168.1.254. The IP address pool can be up to 253 IP addresses.

Set the **DHCP Lease Time** in number of hours. The default value is 72.

If you don't want DSL-2740R to be the DHCP server, you can enable **DHCP relay** to pass the DHCP discover packets of the clients to another DHCP server.

Please set the DHCP server IP address in **DHCP Server IP Address**.

LAN SETUP

This section allows you to configure the local network settings of your router. Please note that this section is optional and you should not need to change any of the settings here to get your network up and running.

ROUTER SETTINGS

Use this section to configure the local network settings of your router. The IP Address that is configured here is the IP Address that you use to access the Web-based management interface. If you change the IP Address here, you may need to adjust your PC's network settings to access the network again.

Router IP Address :

Subnet Mask :

DHCP SERVER SETTINGS (OPTIONAL)

Use this section to configure the built-in DHCP Server to assign IP addresses to the computers on your network.

Enable DHCP Server :

DHCP IP Address Range : to

DHCP Lease Time : (hours)

DHCP Relay :

DHCP Server IP Address :

ADD/EDIT DHCP RESERVATION (OPTIONAL)

Click on the Add button under the DHCP Reservations List.
 Select **Enable** to let you reserve the **IP Address** for the designated PC with the configured MAC Address.

The **Computer Name** can help you recognize this PC with the **MAC Address** by assigning it a name like "Father's Laptop."

Click on **Copy Your PC's MAC Address** to help you get the Mac address from the PC you are using to browse the web page.

Click on **Apply** to save the configuration.

DHCP RESERVATIONS LIST

After the DHCP reservation is saved, the **DHCP RESERVATIONS LIST** will list the configuration.

The **NUMBER OF DYNAMIC DHCP CLIENTS** shows how many DHCP clients (PC or Laptop) are connected to the router currently.

Click on **Save Settings**. You will be asked to reboot by a pop-up window. Click on OK to reboot the router.

LAN SETUP

Do not turn the router off while it is rebooting.

You might need to re-configure your PC NIC settings to enter the router's web manager after reboot.

DHCP RESERVATIONS LIST				
	Enable	Computer Name	MAC Address	IP Address
<input type="checkbox"/>	Enable	Father	00:18:88:BF:5A:F4	192.168.1.5

NUMBER OF DYNAMIC DHCP CLIENTS : 1			
Computer Name	MAC Address	IP Address	Expire Time
06967NBWINXPSP2	00:18:88:BF:5A:F2	192.168.1.2	23 hours, 57 minutes, 7 seconds

REBOOT

The DSL Router has been configured and is rebooting. Please wait...

20%

Time

The **TIME** configuration option allows you to configure, update, and maintain the correct time on the internal system clock. From this section you can set the time zone that you are in and set the NTP (Network Time Protocol) Server. Daylight Saving can also be configured to automatically adjust the time when needed.

To access the **TIME** setting window, click on the **Time and Date** button in the **SETUP** directory.

TIME

Check **Enable NTP Server**.

Select specific time server to use from the **NTP Server Used** drop-down menu. Or, you can type the specific NTP server name.

Select your operating time zone from the **Time Zone** drop-down menu.

If you need to enable daylight saving time, just select **Enable Daylight Saving**. Daylight saving is a period from late Spring to early Fall. Set how many hours to change the time for Daylight saving Offset.

Configure Daylight Saving Dates

Daylight Saving time starts in the most parts of the United States on the second Sunday of March. Each time zone in the United States starts Daylight Saving time at 2 A.M. Thus, in the United States, you should use March, Second, Sunday, at 2:00 A.M for the start time.

Daylight Saving time starts in the European Union on the last Sunday of March. Thus, in the European Union, you must select March, Last, Sunday for the start time. The time must depend on your country's time zone. For example, in Germany you must type 2 because Germany's time zone is 1 hour ahead of GMT or UTC (GMT+1). Thus, in Germany you should use March, Last, Sunday, at 1:00 A.M for the start time.

TIME

The Time Configuration option allows you to configure, update, and maintain the correct time on the internal system clock. From this section you can set the time zone that you are in and set the NTP (Network Time Protocol) Server. Daylight Saving can also be configured to automatically adjust the time when needed.

TIME SETTINGS

Automatically synchronize with Internet time servers

First NTP time server :

Second NTP time server :

TIME CONFIGURATION

Current Router Time : Monday, January 01, 2007 00:04:32 AM

Time Zone :

Enable Daylight Saving :

	Month	Week	Day	Time
Start	<input type="text" value="Sep"/>	<input type="text" value="1st"/>	<input type="text" value="Thu"/>	<input type="text" value="8 am"/>
End	<input type="text" value="Sep"/>	<input type="text" value="1st"/>	<input type="text" value="Fri"/>	<input type="text" value="8 pm"/>

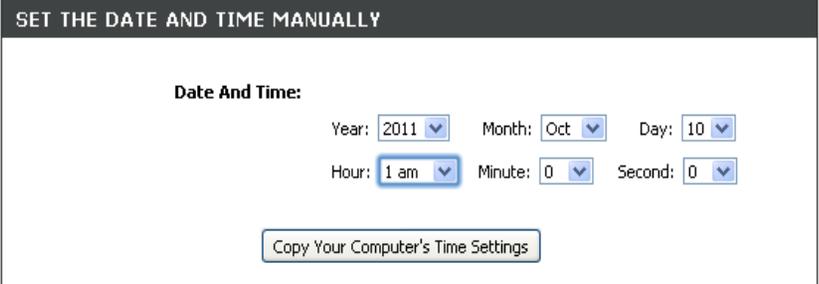

Daylight Saving time ends in most parts of the United States on the first Sunday of November. Each time zone in the United States must use Daylight Saving time at 2:00 A.M. Thus, in the United States you must set November, First, Sunday, at 2:00 A.M as your end time.

Daylight Saving time ends in the European Union on the last Sunday of October. For instance, in Germany you must type 2 because Germany's time zone is 1 hour ahead of GMT (GMT+1). Thus, in Germany you must use March, Last, Sunday, at 1:00 A.M.

SET THE DATE AND TIME MANAULLY

You can also use **Copy Your Computer's Time Settings** to synchronize the Date and Time to your local PC. Or, you can also adjust **Year/Month/Day/Hour/Minute/Second** manually.

Click **Apply** to save the configurations.

SET THE DATE AND TIME MANAULLY

Date And Time:

Year: 2011 Month: Oct Day: 10

Hour: 1 am Minute: 0 Second: 0

Copy Your Computer's Time Settings

Apply Cancel

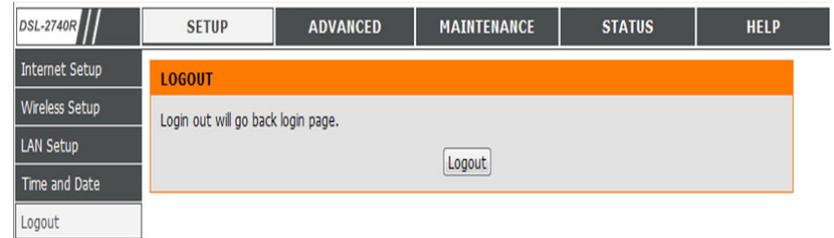

Logout

The **LOGOUT** page enables you to log out of your router configuration and closes the browser.

To access the **LOGOUT** setting window, click on **Logout** in the **SETUP** directory

LOGOUT

Click on **Logout** to log out of the router configuration and close the browser.

Advanced

This chapter includes the more advanced features used for network management and security as well as administrative tools to manage the router, view status, and other information used to examine performance, and for troubleshooting.

Port Forwarding

Use the **PORT FORWARDING** window to open ports in your router and re-direct data through those ports to a single PC on your network (WAN-to-LAN traffic). The Port Forwarding function allows remote users to access services on your LAN such as FTP for file transfers or SMTP and POP3 for e-mail. The DSL-2740R will accept remote requests for these services at your Global IP Address, using the specified TCP or UDP protocol and port number, and then redirect these requests to the server on your LAN with the LAN IP address you specify. Remember that the specified Private IP Address must be within the useable range of the subnet occupied by the router.

To access the **PORT FORWARDING** settings window, click on **PORT FORWARDING** in the **ADVANCED** directory.

ACTIVE PORT FORWARDING

Click **Add** to show the **ADD PORT FORWARDING** page.

Type the values for **Private IP**, **Public Start Port**, and **Public End Port**, and choose the **Protocol Type**.

Click **Apply** to apply the settings.

The image shows two overlapping windows from a router's configuration interface. The top window is titled "ACTIVE PORT FORWARDING" and contains a table with columns: "Private IP", "Protocol Type", "Public Start Port", "Public End Port", "Connection", "Edit", and "Drop". The table is currently empty. Below the table is an "Add" button. The bottom window is titled "ADD PORT FORWARDING" and contains the following fields:

- Private IP :** A text input field containing "0.0.0.0" and a dropdown menu showing "0.0.0.0".
- Protocol Type :** A dropdown menu showing "All".
- Public Start Port :** A text input field containing "0".
- Public End Port :** A text input field containing "0".
- Connection :** A dropdown menu showing "PVC0".

At the bottom of the "ADD PORT FORWARDING" window are "Apply" and "Cancel" buttons.

Application Rules

Use this feature as parental controls to only grant or block access from applications such as peer-to-peer utilities or games .

APPLICATION RULES

Select Allow or Deny for applications such as ICQ, MSN, Yahoo messenger, and Real Audio/Video.

Click **Apply Settings** to save the configuration.

APPLICATION RULE		
Application Rule	<input type="radio"/> Activated	<input checked="" type="radio"/> Deactivated
ICQ	<input checked="" type="radio"/> Allow	<input type="radio"/> Deny
MSN	<input checked="" type="radio"/> Allow	<input type="radio"/> Deny
YMSG	<input checked="" type="radio"/> Allow	<input type="radio"/> Deny
Real Audio/Video	<input checked="" type="radio"/> Allow	<input type="radio"/> Deny

Inbound Filter

By default, all incoming IP traffic from the Internet is allowed. The Inbound Filter allows you to create a filter rule to filter incoming IP traffic by specifying a filter name and at least one condition. All of the specified conditions in this filter rule must be satisfied for the rule to take effect.

ADD INBOUND IP FILTER

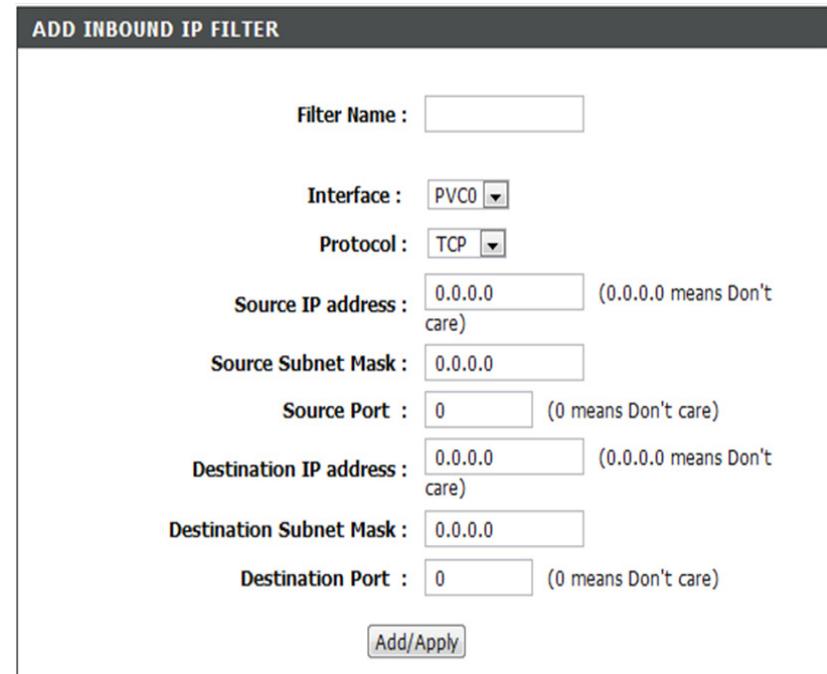

Type the filter name in the **Filter Name** field.

Choose **ICMP, TCP/UDP, TCP, or UDP** in **Protocol**.

Type the **Source IP address, Source Subnet Mask,** and **Source Port**.

Type the **Destination IP address, Destination Subnet Mask,** and **Destination port**.

Please click **Add/Apply** to add the filter to the list.

The screenshot shows a configuration window titled "ADD INBOUND IP FILTER". It contains the following fields and options:

- Filter Name :** An empty text input field.
- Interface :** A dropdown menu with "PVCO" selected.
- Protocol :** A dropdown menu with "TCP" selected.
- Source IP address :** A text input field containing "0.0.0.0" with a note "(0.0.0.0 means Don't care)".
- Source Subnet Mask :** A text input field containing "0.0.0.0".
- Source Port :** A text input field containing "0" with a note "(0 means Don't care)".
- Destination IP address :** A text input field containing "0.0.0.0" with a note "(0.0.0.0 means Don't care)".
- Destination Subnet Mask :** A text input field containing "0.0.0.0".
- Destination Port :** A text input field containing "0" with a note "(0 means Don't care)".

At the bottom of the window is an "Add/Apply" button.

IP/Mac Filter

This is the ability to set filters in the router and re-direct data through those to a single PC on your network.

SELECT IP/MAC FILTER RULE INDEX

Choose **Both, Incoming,** or **Outgoing** in **Direction.**

Type the **Source IP address, Subnet Mask,** and **Port Number.**

Type **Destination IP address, Subnet Mask,** and **Port Number.**

Choose **ICMP, TCP,** or **UDP** in **Protocol.**

Click **Save** to add the policy in the list.

ADD IP/MAC FILTER

Active : Yes No

Interface : PVC0

Direction : Both

Rule Type : IP

Source IP Address : 0.0.0.0 (0.0.0.0 means Don't care)

Subnet Mask : 0.0.0.0

Port Number : 0 (0 means Don't care)

Destination IP Address : 0.0.0.0 (0.0.0.0 means Don't care)

Subnet Mask : 0.0.0.0

Port Number : 0 (0 means Don't care)

Protocol : TCP

Save Delete Cancel

DNS Setup

The DNS is used to resolve the DNS name to IPs. You can type the DNS name or obtain it automatically.

The Dynamic DNS feature allows you to host a server (Web, FTP, Game Server, etc.) using a domain name that you have purchased (for example: www.whateveryournameis.com) with your dynamically assigned IP address. Most broadband Internet Service Providers assign dynamic (changing) IP addresses. Using a DDNS service provider, your friends can just enter your host name to connect to your game server without having to know your IP address.

To access the **DNS** setting window, click on the **DNS** button under the **ADVANCED** tab.

DNS AND DEFAULT GATEWAY

If you are using the router for DHCP service on the LAN and are using DNS servers on the ISP's network, check the **Obtain DNS server address automatically** box.

If you have DNS IP addresses provided by your ISP, enter these IP addresses in the available entry fields for the **Preferred DNS Server** and the **Alternate DNS Server**.

DNS SETUP

Domain Name Server (DNS) is a server that translates URL/domain names to the corresponding IP address. Most users will not need to change the DNS servers from default unless instructed by your ISP.

The DDNS feature allows you to host a server (Web, FTP, Game Server, etc...) using a domain name that you have purchased (www.whateveryournameis.com) with your dynamically assigned IP address. Most broadband Internet Service Providers assign dynamic (changing) IP addresses. Using a DDNS service provider, your friends can enter your host name to connect to your game server no matter what your IP address is.

DNS AND DEFAULT GATEWAY :

Obtain DNS server address automatically

Use the following DNS server addresses

Preferred DNS Server:

Alternate DNS Server:

DDNS CONFIGURATION

Please access a DDNS web server to obtain a domain name. You can use the D-Link DDNS server at <https://www.dlinkddns.com> to receive a free DDNS.

Please enable **Enable Dynamic DNS** if you want to use DDNS.

Choose which DDNS web site to use in **Server Address**.

Type the Host name which you registered with your DDNS service provider in **Host Name**.

Type the username/password on the **Username/Password/Verify Password** of your DDNS account.

After you have configured the DNS settings as desired, click **Apply** to apply the settings.

DDNS CONFIGURATION

Enable Dynamic DNS:

Server Address: << ▾

Host Name: (e.g.: myhost.mydomain.net)

Username:

Password:

Verify Password:

Firewall & DMZ

The router already provides a simple firewall by virtue of the way NAT works. By default NAT does not respond to unsolicited incoming requests on any port, thereby making your WAN invisible to Internet cyber attackers.

DMZ means Demilitarised Zone. DMZ allows computers behind the router firewall to be accessible to Internet traffic. Typically, your DMZ would contain Web servers, FTP servers, and others.

FIREWALL SETTINGS

Enable the Firewall by clicking **Enable Firewall**.

Enable the SPI on clicking **Enable SPI**.

Enable the ALG on clicking **Enable ALG**.

FIREWALL & DMZ

The router already provides a simple firewall by virtue of the way NAT works. By default NAT does not respond to unsolicited incoming requests on any port, thereby making your LAN invisible to Internet cyber attackers.

DMZ means 'Demilitarized Zone'. DMZ allows computers behind the router firewall to be accessible to Internet traffic. Typically, your DMZ would contain Web servers, FTP servers, and others.

FIREWALL SETTINGS

SPI is a basic firewalling feature that is included in standard DSL routers. SPI works at the network layer by examining a packet's header and footer in addition to ensuring the packet belongs to a valid session.

ALG makes application layer "control/data" protocols such as SIP to work through NAT or a firewall that would have otherwise restricted the traffic for not meeting its limited filter criteria.

Enable Firewall :

Enable SPI :

Enable ALG :

DMZ SETTINGS

Please select **Enable DMZ** and type the DMZ client IP in the **DMZ IP Address**.
Or you also can choose the DMZ host using the pulldown menu.

Click on **Apply Settings** to apply these settings.

DMZ SETTINGS

The DMZ (Demilitarized Zone) option lets you set a single computer on your network outside of the router. If you have a computer that cannot run Internet applications successfully from behind the router, then you can place the computer into the DMZ for unrestricted Internet access.

Note: Putting a computer in the DMZ may expose that computer to a variety of security risks. Use of this option is only recommended as a last resort.

Advanced Wireless

These options are for users who wish to change the performance of their 802.11g wireless radio from the standard settings. D-Link does not recommend changing the factory default settings. Incorrect settings may impair the performance of your wireless radio. The default settings should provide the best wireless radio performance in most environments.

ADVANCED WIRELESS SETTINGS

If you need to change the default behavior, please set the following values:

Select from 20 MHz Auto 20/40 MHz on the **Channel Width**.

Select Lower or Upper on the **Control Sideband**.

Select **MCS**.

Please type the **Fragmentation Threshold** value.

Please type the **RTS Threshold** value.

Please type the **DTIM Interval** value.

Please type the **Beacon Interval** value.

ADVANCED WIRELESS

These options are for users that wish to change the behavior of their 802.11g wireless radio from the standard setting. D-Link does not recommend changing these settings from the factory default. Incorrect settings may impair the performance of your wireless radio. The default settings should provide the best wireless radio performance in most environments.

Wi-Fi Protected Setup

Wi-Fi Protected Setup is used to easily add devices to a network using a PIN or button press. Devices must support Wi-Fi Protected Setup in order to be configured by this method.

If the PIN changes, the new PIN will be used in following the Wi-Fi Protected Setup process. Clicking on **Cancel** will not reset the PIN. However, if the new PIN is not saved, it will get lost when the device reboots or loses power.

WI-FI PROTECTED SETUP

Please select **Enable** or **Lock Wireless Security Settings**

You also can click **Reset to Unconfigured** to reset the wireless setting.

PIN SETTINGS

Click on **Reset PIN to Default** or **Generate New PIN**

to show the PIN in the **Current PIN** field.

ADD WIRELESS STATION

Please click **Add Wireless Device with WPS** to set the WPS.

The screenshot displays a configuration page for Wi-Fi Protected Setup. It is divided into three main sections: 'WI-FI PROTECTED SETUP', 'PIN SETTINGS', and 'ADD WIRELESS STATION'. The 'WI-FI PROTECTED SETUP' section includes a header, explanatory text, and two checkboxes: 'Enable' (checked) and 'Lock Wireless Security Settings' (unchecked). A 'Reset to Unconfigured' button is located below these options. The 'PIN SETTINGS' section shows the 'Current PIN' as '00810685' and includes 'Reset PIN to Default' and 'Generate New PIN' buttons. The 'ADD WIRELESS STATION' section features an 'Add wireless Device with WPS' button. At the bottom of the page, there are 'Save Settings' and 'Cancel' buttons.

Advanced LAN

These options are for users that wish to change the LAN settings. D-Link does not recommend changing these settings from factory default. Changing these settings may affect the behavior of your network.

UPNP

Please select **Enable UPnP** when you want to have Universal Plug and Play (UPnP) support peer-to-peer Plug and Play functionality for network devices.

MULTICAST STREAMS

Please click on **Enable Multicast Streams (IGMP)** to let a IGMP stream pass through DSL-2740R.

WAN PING

Enable WAN Ping response by clicking **Enable WAN Ping**. Click on **Apply Settings** to apply the settings.

ADVANCED LAN

These options are for users that wish to change the LAN settings. D-Link does not recommend changing these settings from factory default. Changing these settings may affect the behavior of your network.

UPNP

Universal Plug and Play(UPnP) supports peer-to-peer Plug and Play functionality for network devices.

Enable UPnP :

MULTICAST STREAMS

Consider using multicast streaming if you want the router to broadcast content to a large audience, and network bandwidth and server capacity are limited.

Enable Multicast Streams :

WAN PING

Disable this feature, the wan port of your router won't respond to ping requests from the Internet that are sent to the Wan IP address.

Enable Wan Ping

Apply Settings Cancel

Maintenance

Click on the **MAINTENANCE** tab to view the window buttons for various functions located in this directory.

Password

The factory default password of this router is **admin**. To help secure your network, D-Link recommends that you choose a new password.

SET PASSWORD (OPTIONAL)

Please type the **Current Password**, **New Password**, and **Confirm Password**.

Please click **Apply Settings** to save the settings.

PASSWORD

The factory default password of this router is 'admin'. To help secure your network, D-Link recommends that you should choose a new password.

SET PASSWORD (OPTIONAL)

To change the router password, please type in the current password, then the new password twice.

Current Password:

New Password:

Confirm Password:

Save/Restore Settings

Once the router is configured, you can save the configuration settings to a configuration file on your hard drive. You also have the option to load configuration settings or restore the factory default settings.

SAVE/RESTORE CONFIGURATION

Please click **Save** next to **Save Settings to Local Hard Drive**.

Please click **Browse** to choose the configurations file and then click **Update Settings** to upload the file.

If necessary, please click **Restore Device** to regain the default settings.

Click **Write To Flash** to write web parameters to flash. All your settings will be saved after restart.

The screenshot displays the DSL-2740B router's web interface. The top navigation bar includes tabs for SETUP, ADVANCED, MAINTENANCE, and STATUS. The left sidebar contains links for Password, Save/Restore Settings, Firmware Update, Diagnostics, System Log, Schedules, Logout, Internet Online, English, and Reboot. The main content area is titled 'SAVE/RESTORE SETTINGS' and contains the following text: 'Once the router is configured you can save the configuration settings to a configuration file on your hard drive. You also have the option to load configuration settings, or restore the factory default settings.' Below this, the 'SAVE/RESTORE CONFIGURATION' section includes three options: 'Save Settings to Local Hard Drive' with a 'Save' button; 'Load Settings From Local Hard Drive' with a text input field, a 'Browse...' button, and an 'Update Settings' button; and 'Restore To Factory Default Settings' with a 'Restore Device' button.

Firmware Update

Use the **FIRMWARE UPGRADE** window to load the latest firmware for the device. Note that the device configuration settings may return to the factory default settings, so make sure you first save the configuration settings in the **SAVE/RESTORE SETTINGS** window described in the previous page.

To access the **FIRMWARE UPGRADE** setting window, click **Firmware Update** under the **MAINTENANCE** tab. It shows **Current Firmware Version** and **Current Firmware Date**.

FIRMWARE UPGRADE

To upgrade the firmware, click the **Browse...** button to search for the firmware file and then click **Upload** to begin copying the file. The Router will load the file and restart automatically.

The screenshot displays the web interface for a D-Link DSL-2740R router. The top navigation bar includes tabs for SETUP, ADVANCED, MAINTENANCE (selected), and STATUS. The left sidebar contains menu items: Password, Save/Restore Settings, Firmware Update (selected), Diagnostics, System Log, and Logout. Below the sidebar, there are status indicators for Internet (Offline), Language (English), and a Reboot button. The main content area is titled 'UPDATE' and contains the following sections:

- UPDATE** (orange header)
- Note: Please do not update the firmware on this router unless instructed to do so by D-Link technical support or your ISP.
- FIRMWARE INFORMATION** (dark header)
- Current Firmware Version : EU_1.00
- Current Firmware Date : Jul 27 2011
- FIRMWARE UPDATE** (dark header)
- Note: Some firmware updates reset the configuration options to factory defaults. Before performing an update, be sure to save the current configuration from the [Maintenance -> Save/Restore Settings](#) screen.
- Backup Now button
- Instructions: To update the firmware, your PC must have a **wired** connection to the router. Enter the name of the firmware update file, and click on the Upload button.
- Upload section: Choose File (no file selected) and Update Firmware buttons.

Diagnostics

Your router is capable of testing your DSL connection. The individual tests are listed below. If a test displays a fail status, click **Re-run Diagnostics Tests** at the bottom of this page to make sure the fail status is consistent. If the test continues to fail, click Help and follow the troubleshooting procedures.

SYSTEM CHECK

There are two tests: **Test your Ethernet(1-4) Connection** and **Test ADSL Synchronization**. They will either show **PASS** or **FAIL**.

INTERNET CONNECTIVITY CHECK

There are three tests: **Test the assigned IP address**, **Ping ISP Default Gateway** and **Ping Preferred DNS server**. They will either show **PASS** or **FAIL**.

Please click **Re-run Diagnostics Test** to run diagnostics again on the above test items.

DIAGNOSTICS

Your router is capable of testing your DSL connection. The individual tests are listed below. If a test displays a fail status, click "Re-run Diagnostics Tests" at the bottom of this page to make sure fail status is consistent.

SYSTEM CHECK

Test your Ethernet(1-4) Connection:	PASS
Test ADSL Synchronization:	Fail

INTERNET CONNECTIVITY CHECK

Virtual Circuits : PVC0 ▼

Test the assigned IP address:	Skipped
Ping ISP Default Gateway:	Skipped
Ping Preferred DNS server:	Skipped

Re_run Diagnostics Tests

System Log

The System Log allows you to configure local, remote and email logging, and to view the logs that have been created.

This section allows you to view the logs.

Troubleshooting

This chapter provides solutions to problems that can occur during the installation and operation of the DSL-2740R. Read the following descriptions if you are having problems. (The examples below are illustrated in Windows® XP. If you have a different operating system, the screenshots on your computer will look similar to the following examples.)

1. Why can't I access the web-based configuration utility?

When entering the IP address of the D-Link router (192.168.1.1 for example), you are not connecting to a website on the Internet and do not need to be connected to the Internet. The device has the utility built-in to a ROM chip in the device itself. Your computer must be on the same IP subnet to connect to the web-based utility.

- Make sure you have an updated Java-enabled web browser. We recommend the following:
 - Internet Explorer 6.0 or higher
 - Firefox 1.5 or higher
- Verify physical connectivity by checking for solid link lights on the device. If you do not get a solid link light, try using a different cable or connect to a different port on the device if possible. If the computer is turned off, the link light may not be on.
- Disable any internet security software running on the computer. Software firewalls such as Zone Alarm, Black Ice, Sygate, Norton Personal Firewall, and Windows® XP firewall may block access to the configuration pages. Check the help files included with your firewall software for more information on disabling or configuring it.

- **Configure your Internet settings:**
 - Go to Start > Settings > Control Panel. Double-click on the Internet Options Icon. From the Security tab, click on the button to restore the settings to their defaults.
 - Click on the Connection tab and set the dial-up option to Never Dial a Connection. Click on the LAN Settings button. Make sure nothing is checked. Click on the OK.
 - Go to the Advanced tab and click on the button to restore these settings to their defaults. Click on the OK button three times.
 - Close your web browser (if open) and open it.
- Access the web management. Open your web browser and enter the IP address of your D-Link router in the address bar. This should open the login page for the web management.
- If you still cannot access the configuration, unplug the power to the router for 10 seconds and plug back in. Wait about 30 seconds and try accessing the configuration. If you have multiple computers, try connecting using a different computer.

2. What can I do if I forgot my password?

If you forgot your password, you must reset your router. Unfortunately this process will change all your settings back to the factory defaults.

To reset the router, locate the reset button (hole) on the rear panel of the unit. With the router powered on, use a paperclip to hold the button down for 10 seconds. Release the button and the router will go through its reboot process.

Wait about 30 seconds to access the router. The default IP address is 192.168.1.1. When logging in, type in the default User Name "admin," and the default Password "admin" then click on the OK button to access the web-based manager.

Wireless Basics

D-Link wireless products are based on industry standards to provide easy-to-use and compatible high-speed wireless connectivity within your home, business or public access wireless networks. Strictly adhering to the IEEE standard, the D-Link wireless family of products will allow you to securely access the data you want, when and where you want it. You will be able to enjoy the freedom that wireless networking delivers.

A wireless local area network (WLAN) is a cellular computer network that transmits and receives data with radio signals instead of wires. Wireless LANs are used increasingly in both home and office environments, and public areas such as airports, coffee shops and universities. Innovative ways to utilize WLAN technology are helping people to work and communicate more efficiently. Increased mobility and the absence of cabling and other fixed infrastructure have proven to be beneficial for many users.

Wireless users can use the same applications they use on a wired network. Wireless adapter cards used on laptop and desktop systems support the same protocols as Ethernet adapter cards.

Under many circumstances, it may be desirable for mobile network devices to link to a conventional Ethernet LAN in order to use servers, printers or an Internet connection supplied through the wired LAN. A Wireless Router is a device used to provide this link.

What is Wireless?

Wireless or Wi-Fi technology is another way of connecting your computer to the network without using wires. Wi-Fi uses radio frequency to connect wirelessly, so you have the freedom to connect computers anywhere in your home or office network.

Why D-Link Wireless?

D-Link is the worldwide leader and award winning designer, developer, and manufacturer of networking products. D-Link delivers the performance you need at a price you can afford. D-Link has all the products you need to build your network.

How does wireless work?

Wireless works similar to how cordless phone work, through radio signals to transmit data from one point A to point B. But wireless technology has restrictions as to how you can access the network. You must be within the wireless network range area to be able to connect your computer. There are two different types of wireless networks Wireless Local Area Network (WLAN), and Wireless Personal Area Network (WPAN).

Wireless Local Area Network (WLAN)

In a wireless local area network, a device called an Access Point (AP) connects computers to the network. The access point has a small antenna attached to it, which allows it to transmit data back and forth over radio signals. With an indoor access point as seen in the picture, the signal can travel up to 300 feet. With an outdoor access point the signal can reach out up to 30 miles to serve places like manufacturing plants, industrial locations, college and high school campuses, airports, golf courses, and many other outdoor venues.

Wireless Personal Area Network (WPAN)

Bluetooth is the industry standard wireless technology used for WPAN. Bluetooth devices in WPAN operate in a range up to 30 feet away. Compared to WLAN the speed and wireless operation range are both less than WLAN, but in return it doesn't use nearly as much power which makes it ideal for personal devices, such as mobile phones, PDAs, headphones, laptops, speakers, and other devices that operate on batteries.

Who uses wireless?

Wireless technology has become so popular in recent years that almost everyone is using it, whether it's for home, office, business, D-Link has a wireless solution for it.

Home

- Gives everyone at home broadband access
- Surf the web, check email, instant message, download multimedia files.
- Gets rid of the cables around the house
- Simple and easy to use

Small Office and Home Office

- Stay on top of everything at home as you would at the office
- Remotely access your office network from home
- Share the Internet connection and printer with multiple computers
- No need to dedicate office space

Where is wireless used?

Wireless technology is expanding everywhere not just at home or office. People like the freedom of mobility and it's becoming so popular that more and more public facilities now provide wireless access to attract people. The wireless connection in public places is usually called "hotspots".

Using a D-Link Cardbus Adapter with your laptop, you can access the hotspot to connect to Internet from remote locations like: Airports, Hotels, Coffee Shops, Libraries, Restaurants, and Convention Centers.

Wireless network is easy to setup, but if you're installing it for the first time it could be quite a task not knowing where to start. That's why we've put together a few setup steps and tips to help you through the process of setting up a wireless network.

Tips

Here are a few things to keep in mind, when you install a wireless network.

Centralize your router or Access Point

Make sure you place the router/access point in a centralized location within your network for the best performance. Try to place the router/access point as high as possible in the room, so the signal gets dispersed throughout your home. If you have a two-story home, you may need a repeater to boost the signal to extend the range.

Eliminate Interference

Place home appliances such as cordless telephones, microwaves, and televisions as far away as possible from the router/access point. This would significantly reduce any interference that the appliances might cause since they operate on same frequency.

Security

Don't let you next-door neighbors or intruders connect to your wireless network. Secure your wireless network by turning on the WPA security feature on the router. Refer to product manual for detail information on how to set it up.

Wireless Modes

There are basically two modes of networking:

- **Infrastructure** – All wireless clients will connect to an access point or wireless router.
- **Ad-Hoc** – Directly connecting to another computer, for peer-to-peer communication, using wireless network adapters on each computer, such as two or more D-Link wireless network adapters.

An Infrastructure network contains an Access Point or wireless router. All the wireless devices, or clients, will connect to the wireless router or access point.

An Ad-Hoc network contains only clients, such as laptops with wireless cardbus adapters. All the adapters must be in Ad-Hoc mode to communicate.

Networking Basics

Check your IP address

After you install your new D-Link adapter, by default, the TCP/IP settings should be set to obtain an IP address from a DHCP server (i.e. wireless router) automatically. To verify your IP address, please follow the steps below.

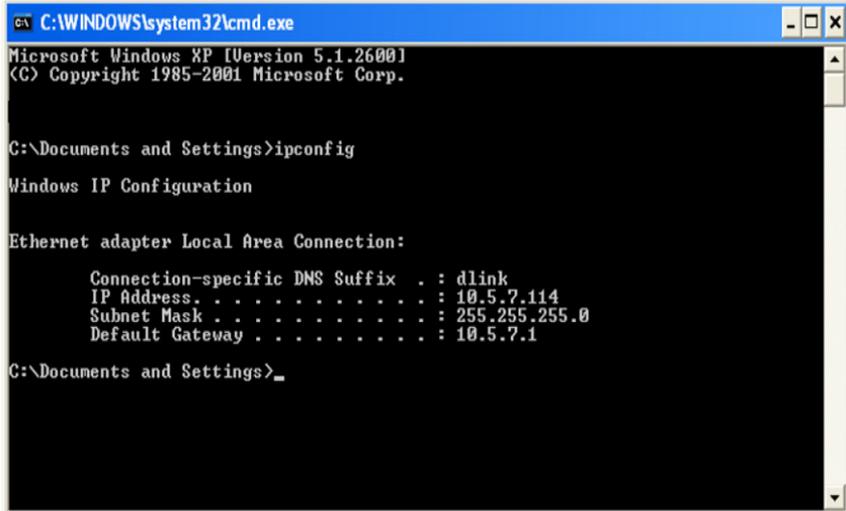

Click on **Start > Run**. In the run box type **cmd** and click on the **OK**.

At the prompt, type **ipconfig** and press **Enter**.

This will display the IP address, subnet mask, and the default gateway of your adapter.

If the address is 0.0.0.0, check your adapter installation, security settings, and the settings on your router. Some firewall software programs may block a DHCP request on newly installed adapters.

If you are connecting to a wireless network at a hotspot (e.g. hotel, coffee shop, airport), please contact an employee or administrator to verify their wireless network settings.

```
C:\WINDOWS\system32\cmd.exe
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings>ipconfig

Windows IP Configuration

Ethernet adapter Local Area Connection:

    Connection-specific DNS Suffix  . : dlink
    IP Address . . . . . : 10.5.7.114
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 10.5.7.1

C:\Documents and Settings>
```

Statically Assign an IP address

If you are not using a DHCP capable gateway/router, or you need to assign a static IP address, please follow the steps below:

Step 1

Windows® 7 - Click on **Start > Control Panel > Network Connections.**

Windows® Vista - Click on **Start > Control Panel > Network Connections.**

Windows® XP - Click on **Start > Control Panel > Network Connections.**

Windows® 2000 - From the desktop, right-click on **My Network Places > Properties.**

Step 2

Right-click on **Local Area Connection** which represents your D-Link network adapter and select **Properties.**

Step 3

Highlight **Internet Protocol (TCP/IP)** and click on **Properties.**

Step 4

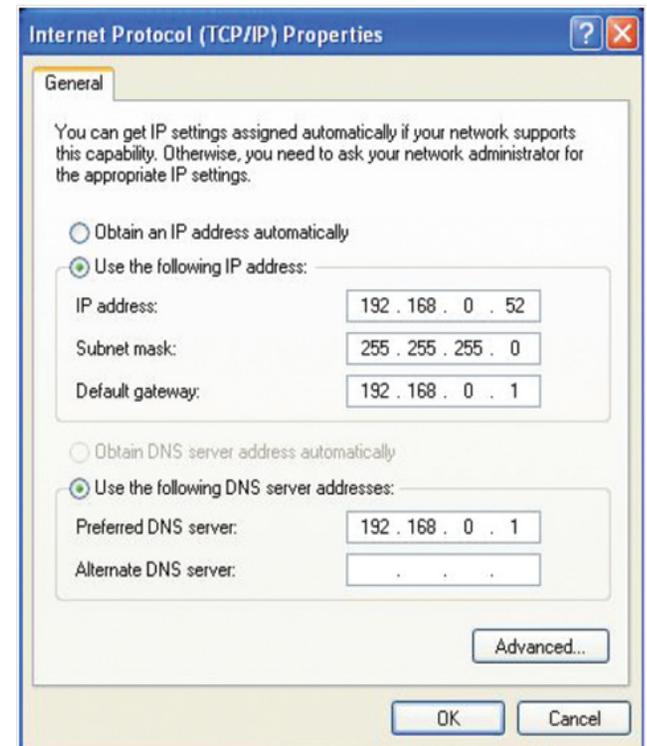

Click on **Use the following IP address** and enter an IP address that is on the same subnet as your network or the LAN IP address on your router.

Example: If the router's LAN IP address is 192.168.0.1, make your IP address 192.168.0.X where X is a number between 2 and 99. Make sure that the number you choose is not in use on the network. Set the Default Gateway the same as the LAN IP address of your router (192.168.0.1).

Set the Primary DNS the same as the LAN IP address of your router (192.168.0.1). The Secondary DNS is not needed or you may enter a DNS server from your ISP.

Step 5

Click on **OK** twice to save your settings.

Technical Specifications

ADSL Standards

- ANSIT1.413 Issue 2
- ITU G.992.1 (G.dmt) AnnexA
- ITU G.992.2 (G.lite) Annex A
- ITU G.994.1 (G.hs)
- ITU G.992.5 Annex A

ADSL2 Standards

- ITU G.992.3 (G.dmt.bis) Annex A
- ITU G.992.4 (G.lite.bis) Annex A

Protocols

- IEEE 802.1d Spanning Tree
- TCP/UDP
- ARP
- RARP
- ICMP
- RFC1334 PAP
- RFC1577 Classical IP over ATM
- RFC1483/2684 Multiprotocol Encapsulation over ATM Adaptation Layer 5 (AAL5)
- RFC1661 Point to Point Protocol
- RFC1994 CHAP
- RFC2131 DHCP Client/DHCP Server
- RFC2364 PPP over ATM
- RFC2516 PPP over Ethernet

Data Transfer Rate

- G.dmt full rate downstream: up to 8 Mbps/upstream: up to 1 Mbps
- G.lite: ADSL downstream up to 1.5 Mbps/upstream up to 512 Kbps
- G.dmt.bis full rate downstream: up to 12 Mbps/upstream: up to 12 Mbps
- ADSL full rate downstream: up to 24 Mbps/upstream: up to 1 Mbps

Media Interface

- ADSL interface: RJ-11 connector for connection to 24/26 AWG twisted pair telephone line
- LAN interface: RJ-45 port for 10/100BASE-T Ethernet connection

Wireless LAN

- 802.11b/g/n standards
- Wireless speed: up to 300 Mbps (802.11n)
- Frequency range: 2.4 GHz to 2.484G Hz
- Antennas: 2 non-detachable dipole antennas.
- WEP data encryption
- WPA/WPA2 (Wi-Fi Protected Access) security
- Multiple SSID
- MAC address-based access control
